ELSEVIER

Journal of Materials Processing Technology 76 (1998) 296–299

Journal of Materials Processing Technology

Subject Index of Volume 76

Abstraction
abstracting performance in hierarchical manufacturing simulation, 246
Acoustic emission signals
tool failure detection based on analysis of acoustic emission signals, 192
Aerofoil section
die-elasticity for precision forging of aerofoil sections using finite element simulation, 56
Aggregate process planning
CAPABLE: an aggregate process planning system for integrated product development, 16
Agile manufacturing
implementation of agile manufacturing—an AI and Internet based approach, 96
Anisotropic
optimum blank shape of cylindrical cups in deep drawing of anisotropic sheet metals, 203
Artificial intelligence
implementation of agile manufacturing—an AI and Internet based approach, 96
intelligent hybrid system for integration in design and manufacture, 23
Automated system
production, computers and humanity, 2
Autonomic-integrated architecture
a two-armed cooperative robot system 'Perseus-1' and its applications to product handling, 140
Autonomic system
production, computers and humanity, 2

Blank shape
optimum blank shape of cylindrical cups in deep drawing of anisotropic sheet metals, 203
Business goals
an optimisation model for information systems, 289
Business process modelling
designing a computer-aided manufacturing systems engineering process, 82

CAD
reverse engineering modelling of free-form surfaces from point clouds subject to boundary conditions, 120
CAD/CAE/CAM
intelligent hybrid system for integration in design and manufacture, 23
CAD/CAM
a step-based geometrical representation as part of product data model of a plastics part, 115
internet tools supporting creation and management of technological environment of CAD/CAM systems, 102
CAD/CAM/CAE
simulation based design, 8
CAD/CAM system
reverse engineering of free-form surfaces, 128
CAD/CAM systems
methodology of off-line software compensation for errors in the machining process on the CNC machine tool, 42
CAE
a relation-based product model for computer supported early design assessment, 88
CAIP
knowledge based method for touch probe configuration in an automated inspection system, 153
CAM
flexible planning logic for technology planning, 76
CAP
flexible planning logic for technology planning, 76
CAPP
a relation-based product model for computer supported early design assessment, 88
knowledge based method for touch probe configuration in an automated inspection system, 153
CAx systems
CAx application for process oriented concurrent design, 176
CNC
flexible planning logic for technology planning, 76
Complex shapes
identification and geometrical modelling of complex shape surfaces using coordinate measuring machine and CAD/CAM systems, 49
Computer-aided design
computer-aided design of nett-forming by injection forging of engineering components, 62
Computer aided manufacturing
geometrical characteristics of machined shape for computer aided operation planning, 109
Computer aided process planning
CAPABLE: an aggregate process planning system for integrated product development, 16
geometrical characteristics of machined shape for computer aided operation planning, 109
Computer aided production management
agent-based production management, 252
Computer integrated manufacturing (CIM)
organisational problems and issues of CIM systems design, 219
Concurrent design
CAx application for process oriented concurrent design, 176
Concurrent engineering
a relation-based product model for computer supported early design assessment, 88
CAPABLE: an aggregate process planning system for integrated product development, 16
computer aids for engineering change control, 187
Configuration management
computer aids for engineering change control, 187

Elsevier Science S.A.
PII S0924-0136(98)00004-1

Confining
shaping a thermoplastic object in the desired form without costly mechanical processing, 182
Controls
object-oriented modelling of material flow controls, 227
Cooperative robot
a two-armed cooperative robot system 'Perseus-1' and its applications to product handling, 140
Coordinate measurement
reverse engineering of free-form surfaces, 128
Coordinate measuring machine
knowledge based method for touch probe configuration in an automated inspection system, 153
Coordinate measuring technique
identification and geometrical modelling of complex shape surfaces using coordinate measuring machine and CAD/CAM systems, 49
Co-ordination
agent-based production management, 252
intelligent decision support, 257
Cylindrical cups
optimum blank shape of cylindrical cups in deep drawing of anisotropic sheet metals, 203

Databases
internet tools supporting creation and management of technological environment of CAD/CAM systems, 102
Decision support tool
information models in an integrated fixture decision support tool, 29
Design
intelligent hybrid system for integration in design and manufacture, 23
Die-elasticity
die-elasticity for precision forging of aerofoil sections using finite element simulation, 56
Dimensional inspection
knowledge based method for touch probe configuration in an automated inspection system, 153
Distributed production
agent-based production management, 252
intelligent decision support, 257
Dynamic lot-sizing
a dynamic procedure for defining an order quantity, 276

ECM
process monitoring of electrochemical micromachining, 165
Electrochemical machining (ECM)
computer simulation electrochemical shaping (ECM-CNC) using a universal tool electrode, 161
Engineering change control
computer aids for engineering change control, 187
Entirety of production
selected aspects of development and planning of production and logistic systems, 233
Error compensation
methodology of off-line software compensation for errors in the machining process on the CNC machine tool, 42
Evaluation
a new FMS simulator with object-oriented-programming techniques, 238
Expert systems
an expert process planning system for meat cutting by high pressure water-jet, 146

Feature-based manufacturing
flexible planning logic for technology planning, 76
FE simulation
die-elasticity for precision forging of aerofoil sections using finite element simulation, 56
Finite-element simulation
computer-aided design of nett-forming by injection forging of engineering components, 62
Fixture design
information models in an integrated fixture decision support tool, 29
Flexible automated system
object-oriented modelling of material flow controls, 227
Flexible manufacturing system
a new FMS simulator with object-oriented-programming techniques, 238
Flexible manufacturing systems
modelling and design of flexible manufacturing systems using SADT and Petri nets tools, 212
FMS modelling
a new FMS simulator with object-oriented-programming techniques, 238
FMS simulation
a new FMS simulator with object-oriented-programming techniques, 238
Form shaping function
geometrical characteristics of machined shape for computer aided operation planning, 109

Gap monitoring
process monitoring of electrochemical micromachining, 165
Geometrical representation
a STEP-based geometrical representation as part of product data model of a plastics part, 115
Geometric modelling
identification and geometrical modelling of complex shape surfaces using coordinate measuring machine and CAD/CAM systems, 49
reverse engineering of free-form surfaces, 128
Goal programming
an optimisation model for information systems, 289

HFV (High Frequency Vibration)
shaping a thermoplastic object in the desired form without costly mechanical processing, 182
Hierarchical
abstracting performance in hierarchical manufacturing simulation, 246
Human interface
production, computers and humanity, 2
Hybrid production system
computer information systems in complex manufacturing, 284
Hybrid system
intelligent hybrid system for integration in design and manufacture, 23

Information models
information models in an integrated fixture decision support tool, 29
Information system
computer information systems in complex manufacturing, 284
Information systems
analyzing manufacturing process information, 270
an optimisation model for information systems, 289
Information technology
logistic orientated product design, 12
Injection forging
computer-aided design of nett-forming by injection forging of engineering components, 62

Integrated manufacturing
CAx application for process oriented concurrent design, 176
Intelligent evaluation
a new FMS simulator with object-oriented-programming techniques, 238
Internet
implementation of agile manufacturing—an AI and Internet based approach, 96
Internet tools
internet tools supporting creation and management of technological environment of CAD/CAM systems, 102
Interoperability
intelligent decision support, 257
Interorganisational integration
organisational problems and issues of CIM systems design, 219
Interpolation and approximation of surfaces
identification and geometrical modelling of complex shape surfaces using coordinate measuring machine and CAD/CAM systems, 49
Intraorganisational integration
organisational problems and issues of CIM systems design, 219
IRT (Indirect Rapid Tooling)
shaping a thermoplastic object in the desired form without costly mechanical processing, 182

Knowledge based system
knowledge based method for touch probe configuration in an automated inspection system, 153
Knowledge of design
optimization of production process design in small- and medium bath production, 279

Laser scanner
operating system for laser scanners, 69
Logistic
logistic orientated product design, 12
Logistics
selected aspects of development and planning of production and logistic systems, 233

Machined shape
geometrical characteristics of machined shape for computer aided operation planning, 109
Machine tools and robots
a new technique for identification of servodrives of machine tools and robots, 36
Machining error
methodology of off-line software compensation for errors in the machining process on the CNC machine tool, 42
Machining feature
geometrical characteristics of machined shape for computer aided operation planning, 109
Machining process model
geometrical characteristics of machined shape for computer aided operation planning, 109
Manufacture
intelligent hybrid system for integration in design and manufacture, 23
Manufacturing
abstracting performance in hierarchical manufacturing simulation, 246
Manufacturing information process
analyzing manufacturing process information, 270
Manufacturing process
selection of manufacturing process in mechanical design, 198
Manufacturing system engineering
designing a computer-aided manufacturing systems engineering process, 82
Manufacturing systems
analyzing manufacturing process information, 270
Material flow
object-oriented modelling of material flow controls, 227
Material requirements planning (MRP)
a dynamic procedure for defining an order quantity, 276
Measurement data handling
operating system for laser scanners, 69
Meat products
an expert process planning system for meat cutting by high pressure water-jet, 146
Mechanical design
selection of manufacturing process in mechanical design, 198
Mechanical transmission
intelligent hybrid system for integration in design and manufacture, 23
Micro-machining
process monitoring of electrochemical micromachining, 165
Mullite
shaping a thermoplastic object in the desired form without costly mechanical processing, 182
Multi-agent systems
agent-based production management, 252
Multi agent systems
intelligent decision support, 257

Nett-forming
computer-aided design of nett-forming by injection forging of engineering components, 62
Numerical control (NC)
computer simulation electrochemical shaping (ECM-CNC) using a universal tool electrode, 161
NURBS
reverse engineering modelling of free-form surfaces from point clouds subject to boundary conditions, 120
reverse engineering of free-form surfaces, 128

Object-oriented modelling
object-oriented modelling of material flow controls, 227
Ontology
issues on the architecture of an integrated general-purpose ShopFloor control software system, 261
Open architecture
issues on the architecture of an integrated general-purpose ShopFloor control software system, 261
Optimisation
an optimisation model for information systems, 289

PDM
CAx application for process oriented concurrent design, 176
Petri nets
modelling and design of flexible manufacturing systems using SADT and Petri nets tools, 212
Planning of production
optimization of production process design in small- and medium bath production, 279
Plastic
a STEP-based geometrical representation as part of product data model of a plastics part, 115
Postprocessing
methodology of off-line software compensation for errors in the machining process on the CNC machine tool, 42
Precision forging
die-elasticity for precision forging of aerofoil sections using finite element simulation, 56
Process management
organisational problems and issues of CIM systems design, 219

Process mapping
computer information systems in complex manufacturing, 284
Process planning
an expert process planning system for meat cutting by high pressure water-jet, 146
Product data model
a STEP-based geometrical representation as part of product data model of a plastics part, 115
Production
production, computers and humanity, 2
Production engineering
selected aspects of development and planning of production and logistic systems, 233
Production-supporting services
selected aspects of development and planning of production and logistic systems, 233
Production systems
selected aspects of development and planning of production and logistic systems, 233
Product modelling
a relation-based product model for computer supported early design assessment, 88

Quick motion
an over-rated control strategy for quick motion or tough supporting in robots, 133

Recycling production
selected aspects of development and planning of production and logistic systems, 233
Regression
methodology of off-line software compensation for errors in the machining process on the CNC machine tool, 42
Reverse engineering
reverse engineering modelling of free-form surfaces from point clouds subject to boundary conditions, 120
Robot
an over-rated control strategy for quick motion or tough supporting in robots, 133
production, computers and humanity, 2
Robot arm
a two-armed cooperative robot system 'Perseus-1' and its applications to product handling, 140
Robot driving
an over-rated control strategy for quick motion or tough supporting in robots, 133
Robot dynamics
an over-rated control strategy for quick motion or tough supporting in robots, 133
Robot leg
an over-rated control strategy for quick motion or tough supporting in robots, 133

Selection aid
selection of manufacturing process in mechanical design, 198
Serodrives
a new technique for identification of servodrives of machine tools and robots, 36
ShopFloor control
issues on the architecture of an integrated general-purpose ShopFloor control software system, 261
Simulation
abstracting performance in hierarchical manufacturing simulation, 246
a new FMS simulator with object-oriented-programming techniques, 238
designing a computer-aided manufacturing systems engineering process, 82
Simulator
a new FMS simulator with object-oriented-programming techniques, 238
Simultaneous engineering
logistic orientated product design, 12
Software generation
issues on the architecture of an integrated general-purpose ShopFloor control software system, 261
STEP
a STEP-based geometrical representation as part of product data model of a plastics part, 115
Structured analysis and design technique (SADT)
modelling and design of flexible manufacturing systems using SADT and Petri nets tools, 212
Systems engineering
analyzing manufacturing process information, 270

Technique for identification
a new technique for identification of servodrives of machine tools and robots, 36
Time compression technologies
simulation based design, 8
Tool condition monitoring
tool failure detection based on analysis of acoustic emission signals, 192
Tool failure detection
tool failure detection based on analysis of acoustic emission signals, 192
Touch probe
knowledge based method for touch probe configuration in an automated inspection system, 153
Two-armed robot
a two-armed cooperative robot system 'Perseus-1' and its applications to product handling, 140

Universal electrode
computer simulation electrochemical shaping (ECM-CNC) using a universal tool electrode, 161

Value chain
computer information systems in complex manufacturing, 284

Water-jet cutting
an expert process planning system for meat cutting by high pressure water-jet, 146
Workflow
intelligent decision support, 257
WWW applications
internet tools supporting creation and management of technological environment of CAD/CAM systems, 102
